

PROJECT EXPERIENCE

LEXUS EXPANSION

TOYOTA MOTOR ENG. & MFG. NORTH AMERICA, GEORGETOWN, KY

Denham-Blythe designed and built an expansion to the existing manufacturing facility. The project included many additions, upgrades, relocation of entryway and provisions for future dock doors. The existing exterior wall was not removed until the new expansion was completed reducing the risk of production stoppage and contaminate infiltration.

- Rerouted main fireline and storm system outside of the building footprint and placed below the elevation for future docks
- Relocated existing employee entry vestibule
- Installed and programmed Big Ass fans to communicate with existing control system
- Installed steel frames for the doors
- Completed the project without disruption to Lexus production
