

PROJECT EXPERIENCE

FORGING PLANT EXPANSIONS AND ADDITIONS

INTERNATIONAL CRANKSHAFT INC., GEORGETOWN, KY

International Crankshaft needed extra space in their facility to meet growing production demands. Denham-Blythe was able to design and build an expansion that involved planning and zoning work, relocation of a city street, and seven separate building additions on three sides of the existing facility without disrupting plant operations.

- Managed a 12-phased schedule
- Placed process foundations for induction heater, stamping press, twister press, coining press, bolster wash, and cullet conveyor
- Erected a water cooling system
- Constructed a waste water treatment system
- Greatly expanded the existing parking lot
- Installed storm water runoff controls
